

The Tecforte team strives to provide world-class services by delivering comprehensive solutions and information with industry-leading response time.

Reaching Out To You

TecForte is an ICT Security focused company which provides enterprise security management solutions that combine performance for real-time threat management and the capacity to store raw data for historic and forensic analysis. Log Radar – the company’s flagship product and the centerpiece of an overall risk-management strategy for companies, government agencies and Managed Security Service Providers—empowers enterprises to limit risk without sacrificing business productivity.

Every enterprise's top priority goal in maintaining IT Operations is business continuity—to keep core business functions operating under all circumstances. That's more and more challenging, as business threats now derive from a broad range of internal and external factors. The expected response time to a business disruption has also accelerated—employees, partners, customers, and regulators expect immediate resolution.

An enterprise must anticipate and plan for potential disasters. You can't start from scratch on the day of a disaster. At that point, it's too late. When a disaster happens, the inability to operate normally or provide access to critical resources can hurt revenue, damage a company's reputation, or mar the corporate brand. This is why responsibility for the once-mundane matter of IT Security planning has risen from middle management to the highest echelons of the corporate hierarchy. A strong IT Security plan requires the involvement and commitment of both technology and business sides of an organization.

The LR Assist Web Site: your hands-on information

When managing various security devices, security administrators need to be able to know and understand precisely the behavior and the impact of attacks that are constantly being detected by the firewalls, anti spam solutions and Antivirus solutions. The LR Assist provides IT Security Personnel the platform of information to make wise decisions when setting up rules in the Log Radar Product.

The LR Assist has been created with the ease of navigation in mind and it can be accessed through the LogRadar SIEM tool or through an independent web browser. It has been designed to meet enterprise-class IT and user requirements,

It is a good practice to regularly check the Web site to educate oneself.
